

Selenium

Tip

- Kompatibilita Firefoxu a Selenium je trošku ruleta. V současnosti například funguje Selenium 3.2.0 a Firefox 47. S aktuálním Firefox 52 Selenium nefunguje.
- Best practice je stáhnout nějakou poslední funkční verzi a zablokovat aktualizace aby se „nerozbila“:
 - <https://ftp.mozilla.org/pub/firefox/releases/>

Selenium & Spring Boot

```
@RunWith(SpringRunner.class)
```

```
@SpringBootTest(webEnvironment = WebEnvironment.RANDOM_PORT)
```

```
public class SeleniumTest {
```

```
@LocalServerPort private int port; ← Získá port na kterém běží aplikace
```

```
@Test public void testFF() {
```

```
    FirefoxBinary binary ← Instalace Firefox 47
```

```
    = new FirefoxBinary(new File("c:/Program Files/Mozilla Firefox-47/firefox.exe"));
```

```
    FirefoxProfile profile = new FirefoxProfile();
```

```
    WebDriver driver = new FirefoxDriver(binary, profile);
```

```
    driver.get("http://localhost:" + port); ← GET homepage
```

```
    driver.quit(); ← Uzavře všechny instance Firefoxu
```

```
}
```

```
}
```

IE driver

- Nejprve je nutné stáhnout a rozbalit IE driver server:
 - <http://www.seleniumhq.org/download/>
- Použití:

```
@Test
```

```
public void testIE() throws IOException {  
    System.setProperty("webdriver.ie.driver",  
        "c:/Program Files/Selenium/IEDriverServer.exe");  
    WebDriver driver = new InternetExplorerDriver();  
    driver.get("http://localhost:" + port);  
    driver.quit();  
    Runtime.getRuntime().exec("taskkill /f /fi \"pid gt 0\" /im iexplore.exe");  
}
```

Chrome driver

- Obdobným způsobem lze rozchodit Chrome driver:

@Test

```
public void testCH() throws IOException {  
    System.setProperty("webdriver.chrome.driver",  
        "c:/Program Files/Selenium/chromedriver.exe");  
    WebDriver driver = new ChromeDriver();  
    driver.get("http://localhost:" + port);  
    driver.quit();  
}
```

JUnit setup – více testů

```
private WebDriver driver;
```

```
@Before public void setUp() {
```

```
    FirefoxBinary binary = new FirefoxBinary(
```

```
        new File("c:/Program Files/Mozilla Firefox-47/firefox.exe"));
```

```
    FirefoxProfile profile = new FirefoxProfile();
```

```
    driver = new FirefoxDriver(binary, profile);
```

```
}
```

```
@After public void tearDown() {
```

```
    driver.quit();
```

```
}
```

```
@Test public void testPageRendered() {
```

```
    driver.get("http://localhost:" + port);
```

```
    driver.findElement(By.id("end"));
```

```
}
```
